Education

York University

Bachelor of Engineering (Hons) - Software Engineering

Expected June 2027

Toronto, Ontario

Technical Skills

Languages: Java, Python, Swift, HTML, CSS, Assembly, JavaScript, Elixir, React, C, C#

Developer Tools: SwiftUI, Xcode, VS Code, IntelliJ, Eclipse, JUnit, Linux, Git, Maven, MATLAB, Jira, Postman, BrowserStack, LaunchDarkly, StrongDM, Figma, Unity

Experience

Software QA Analyst

April 2025 – August 2025

TheScore - Wagering (Marketplace Foundations/Sportsbook Experience)

Toronto, ON

- Executed **front-end** and **feature flag testing** across **100,000+** active users on **iOS, Android, and Web platforms** to validate wagering features and odds changes.
- Performed **backend API testing** in collaboration with developers for Marketplace Foundation services, including ESPN account linking and Fantasy Picks, ensuring proper integration and data flow, resulting in a **23% increase in linked user accounts over the course of the 4 months**.

Software/Hardware QA Analyst

January 2025 – April 2025

TheScore - Retail

Toronto, ON

- Led QA efforts for program's sunset project involving ESPN BET's Kiosk and OTC systems, performing **backend API testing** using **Postman** and working one-on-one with developers, managers, and directors to validate functionality, troubleshoot issues, and ensure a smooth system transition across hardware and software systems.
- Collaborated cross-functionally with **front-end, back-end, and systems** teams to triage and resolve issues efficiently, resulting in a **93% decrease in service interruptions**.
- Proactively identified and escalated issues during **regression** and **functional testing**, while leading the team's Backward Compatibility Testing, ensuring consistent performance using **Datadog**.
- Reviewed application code with developers to troubleshoot issues and validate fixes during the **QA Regression cycle**.

Peer Mentor

August 2023 – May 2024

York University

Toronto, ON

- Offered ongoing assistance to students, helping them with university-related questions, course selection, and campus resources throughout the academic year.
- Collaborated with fellow mentors and university staff in regular meetings to discuss strategies, share insights, and plan mentoring activities.

Projects

PumpScout - Backend & iOS Developer | *SwiftUI, Python, FastAPI, Playwright, SQLite3*

[Source Code](#)

- Built a full-stack Toronto gas price tracker using a **FastAPI** backend with **Playwright** and **BeautifulSoup** to scrape JavaScript-rendered web pages, storing historical data in **SQLite** with upsert logic to prevent duplicates.
- Developed a **REST API** with endpoints for on-demand scraping, 7-day price history retrieval, and a buy/sell recommendation engine that compares current prices against the weekly average, consumed by a **SwiftUI** iOS app.
- Engineered an async web scraping pipeline using headless **Chromium** via **Playwright** to bypass JavaScript rendering, with custom HTML parsers to extract live gas prices and next-day predictions from a dynamic news site.

KeepFresh - Full-Stack Developer | *Nextjs, TypeScript, FastAPI, MongoDB, OpenAI API*

[Source Code](#)

- Built the marketing homepage for a full-stack grocery tracking app in a **5-person agile team** using **Next.js 15** and **React 19**, contributing to a codebase spanning a **FastAPI** backend, **MongoDB** database, and **OpenAI-powered receipt parsing**.
- Developed **RESTful API** endpoints in **FastAPI** to support fridge item management and **OpenAI-powered receipt OCR** that automatically extracts grocery line items from uploaded images.
- Implemented a **real time email notification system** that sends expiry reminders based on per-user preferences and configurable lead times, with **SMTP integration**.

FocusFlow | *Python, MySQL*

[Source Code](#)

- Developed a **Python-based time tracking system** that logs active application usage with timestamps and total time spent using **Pygetwindow** for active window detection.
- Integrated a **MySQL database**, to log application data, tracking start time, end time, and total usage, providing detailed time reports.
